Product Tools — Jira, Confluence, Figma, Miro

Product Execution — User stories, backlog management, wireframing, A/B testing

Strategy & Research — User research, competitor analysis, market research, PRD writing

SOFT SKILLS

Stakeholder communication, problem-solving, analytical thinking, cross-functional teamwork

PROJECTS

CampusConnect – AI-Driven Campus Engagement Platform

Tools/Platforms: Figma, Product Requirement Documents (PRD), User Stories, MVP Definition, AI Recommendation Systems

- Identified key user problem of fragmented academic and social tools causing low engagement and notification fatigue among university students.
- Defined product vision and MVP scope by translating user needs into structured PRDs, user stories, and acceptance criteria.
- Designed AI-powered onboarding, interest-based recommendations, and automated study group matching using personalization and NLP concepts.
- Collaborated on UX flows and wireframes to enable university ID login, profile creation, and contextual notifications.
- Measured success through defined KPIs including 60% reduction in irrelevant notifications and 40% improvement in study group formation efficiency.

MaidInCity – Urban House Help Discovery & Solution Design Project

Tools/Platforms: User Interviews, Market Research, Value Proposition Canvas, Competitive Analysis, Product Discovery Frameworks

- Analyzed an unorganized urban market where users struggle to find reliable and verified house help due to trust and availability issues.
- Conducted **primary user research** through interviews, surveys, and direct observation to identify core pain points and behavioral patterns.
- Synthesized insights using **Value Proposition Canvas** to define customer jobs, pains, and gains.
- Designed a mobile-first product concept offering verified professionals, subscription plans, ratings, and 24-hour replacement support.
- Validated problem–solution fit with **75% user adoption intent**, confirming strong demand for a digital house help platform.
